

Q&A from Matthews Asia

September 2017

Matthews China Small Companies Fund

Q What is the objective of the Matthews China Small Companies Fund?

A The Matthews China Small Companies Fund seeks long-term capital appreciation by investing primarily in small companies in China. China includes its administrative and other districts, such as Hong Kong.

Q How do you define small companies?

A Typically, Matthews China Small Companies Fund invests in companies that have a market capitalization between US\$100 million to US\$3 billion at the time of purchase. We are able, however, to invest in companies as large as the largest company in the benchmark—the MSCI China Small Cap Index.

Q What is the appeal of investing in China's smaller companies?

A Small-cap companies in China are at the forefront of the country's economic shift away from fixed asset investments toward innovation, consumption and services. Small-cap companies tend to thrive in productivity- and value-enhancing industries such as automation, health care, e-commerce and education. These areas are underrepresented in large-cap-oriented benchmarks and portfolios. We believe these small-cap companies have the entrepreneurial spirit and flexibility to recognize and respond to changing local market trends, including changing patterns of consumption.

Figure 1. Small Businesses Play an Important Role in China's Economy

Q What type of companies are you looking to identify?

A Through rigorous on-the-ground research and due diligence, in a market that is relatively uncovered by the sell-side research community, we aim to identify quality businesses run by disciplined management teams that can grow sustainably and survive over a full market cycle. The portfolio invests in asset-light businesses with low leverage. These companies tend to have faster average earnings growth and higher average return in invested capital compared with the overall China small-cap equity market.

Q What makes China's smaller companies attractive investments?

A Smaller companies in China may lack access to capital, meaning they must be more competitive, innovative and capital-efficient than their larger peers both to survive and thrive. This capital efficiency can drive a strong return on invested capital. While smaller companies in China are perceived to be a higher risk investment, the historical volatility of Chinese small caps has been lower than the overall Chinese equity universe and even the U.S. small-cap universe. In our opinion, small companies provide opportunities for higher growth at lower valuation because they are less well-known. This allows active managers to uncover opportunities among high-quality companies with good corporate governance at lower valuations.

Q On which areas of the small-cap market does the Fund focus?

A The Fund focuses on innovative, efficient and sustainable growth companies, with an emphasis on businesses oriented toward domestic demand and rising income levels. The structural attributes of the portfolio include a consistent overweight allocation in the consumer and health care sectors, as well as selective businesses within the industrials and information technology sectors. In addition, the Fund generally is structurally underweight in companies with cyclical business models, such as those in the materials sector.

Q Is innovation a key consideration when selecting stocks for the portfolio?

A Yes, it is an important consideration when we look to invest in small companies in China. Smaller companies don't have much capital to compete with their larger peers. The most sustainable way of winning against the bigger companies, therefore, is through sustainable innovation. This could be a technology innovation that results in an intellectual-property moat or a business-model innovation where the smaller company has figured out a better way to do business.

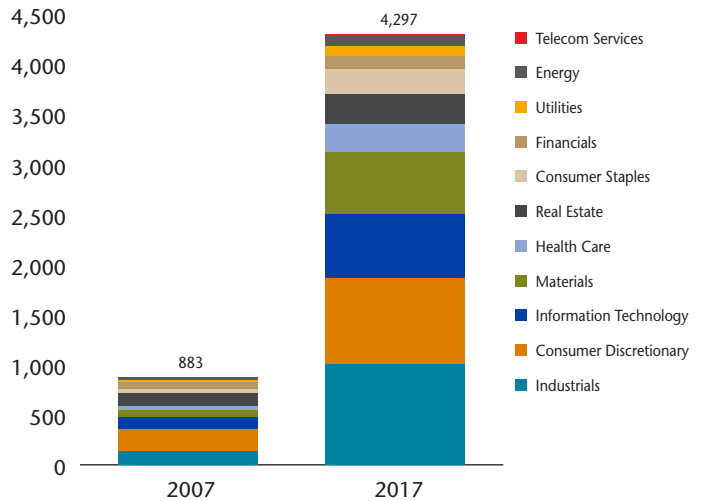

Q How big is China's universe of small-capitalization companies?

A Approximately 4,300 companies domiciled in China have a market capitalization of less than US\$3 billion.

Q What is your investment process?

A At Matthews Asia, we employ a fundamental, bottom-up investment process. We seek to identify companies with sustainable long-term growth prospects, strong business models, quality management teams and reasonable valuations. We believe this bottom-up process is particularly well-suited for the small-cap asset class.

Figure 2. China's Small Company Universe is Expanding for Foreign Investors

Includes all companies domiciled in Hong Kong, Macau and mainland China with market cap of US\$50MN to US\$3BN. 2007 figures do not include companies listed on the Shanghai or Shenzhen exchanges as they were not available to foreign investors at the time.

Source: Sources: FactSet Research Systems and Bloomberg as of August 31, 2017

Our pool of potential candidates for the portfolio is comprised of almost 4,300 companies. As most of these companies are not widely covered by sell-side analysts, we first screen for companies with these attributes: return on invested capital, sales growth, gross margins, liquidity and net debt to equity. We then employ technical analysis to identify a subset of around 300 to 350 companies. In the next stage, we conduct a deeper analysis into the industry dynamics and secular growth trends in China in order to identify sectors, subsectors and companies that we believe offer the most attractive long-term growth potential. These measures of attractiveness include: relative independence from government regulation and changes in policy; parts of the economy that offer long-term growth prospects; sectors that have the ability to benefit from pricing power; and sectors that have lower competition. This narrows our investment universe down to some 100+ companies for potential inclusion in the portfolio.

Q How do you then construct the portfolio?

A Once a quality company and management team has been identified, we consider valuation from multiple angles, including measuring the value of the company's business as a whole in order to determine whether the current entry point is sensible, both in the context of its current business, and its future growth prospects. In constructing the portfolio, our position sizes are determined by several factors such as liquidity, valuations and our conviction in corporate fundamentals. Our portfolio is benchmark-agnostic and is fairly concentrated. We tend to have 40 to 60 holdings with position weights typically ranging between 1% and 5%. While we put no upper limit on the holding size, a typically high-conviction holding size is higher than 2.5%.

We believe benchmarks are backward-looking and do not accurately reflect how China's economy and society will develop. While we are mindful of diversification, it does not dictate our portfolio construction decisions. The outcome of this approach is a high active share of more than 90%.

Q What happens when a company grows to the size that no longer can be considered "small cap"?

A The Fund's portfolio managers are disciplined about reallocating capital once certain holdings become mid-cap companies. The overall aim is to build a balanced portfolio of companies that come from China's diverse markets and sectors. For those in the same sector, we look to diversify across subsectors.

Q How important is meeting with management?

A Meeting with management is a critical component of our investment process. Over 2,800 actively traded small companies in China lack any analyst coverage. With little or no broker coverage of Chinese small-cap companies, our analysis is comparable to what would be done on a typical private-equity investment—using rigorous due diligence to uncover the many untapped high-quality opportunities in this space. The aim of the portfolio managers is to peel away the layers of the company in order to understand the cohesiveness of its past, present and future. As part of this, we aim to meet with a company's management team before investing in it. A sense of trust in the team is of central importance. A key aspect is to understand management's strategic vision and how it expects to deliver on its expectations for its product or service innovation. We also assess the founder's background for experience and integrity in order to judge the overall governance of the firm.

Q What is your investment horizon when investing in smaller companies?

A Contrary to many investors in small-cap stocks, we aim to extend our investment horizon to a minimum of three years and ideally to five years or longer when investing in a business.

Q What's a key misconception an investor may have about China's small companies?

A There are misconceptions about the level of volatility in China's small-cap market. In fact, China's small-cap stocks tend to be less volatile than large-cap Chinese stocks because they are more macro-agnostic and carry less debt. More surprisingly, compared with U.S. small caps as represented by the Russell 2000 Index, Chinese small caps were less volatile, had higher return on equity (ROE) and lower leverage ratios.* We continue to believe that small caps in China offer very attractive risk-adjusted return potential compared with equity markets globally.

Q What risk measurement tools do you use?

A We seek to directly address the risks of investing in China's smaller companies within our research and due diligence process. This includes corporate governance oversight, limited product lines, markets or financial resources, dependency upon key individuals or lack of management depth, limited access to capital, or limited stock liquidity. We believe that embedding risk management in the due diligence process can help to mitigate risk and contribute to a portfolio with lower volatility than the overall small-cap market.

Q What experience does Matthews Asia have investing in China's smaller companies?

A For more than 20 years, Matthews Asia has provided investors with access to opportunities created by China's profound economic transformation. We have invested across the market-cap spectrum, including smaller companies, since the launch of the Matthews China strategy in 1998. Our experience across market cycles provides us with a thorough understanding of what it takes for companies to be successful in the rapidly changing Chinese economy.

Q What experience does the Lead Manager have investing in small companies in China?

A Tiffany Hsiao, CFA, is the Lead Manager of the Matthews China Small Companies strategy, and has 15 years of industry experience researching and investing in Chinese equities, as well as innovative companies across the technology and services sectors in Asia. Tiffany joined Matthews Asia in 2014 and has been Lead Manager of the Fund since July 2015. In addition to support from a 45-strong investment team at Matthews Asia, Tiffany is supported by Co-Manager Kenichi Amaki. Kenichi also is the Lead Manager of the Matthews Japan Fund and co-manages the Matthews Asia Small Companies Fund.

Q Why should investors consider this fund?

A The Matthews China Small Companies Fund provides investors with exposure to a growing universe of small companies that account for an increasingly meaningful share of China's economic growth. Through participation in the Fund, investors can gain access to private sector entrepreneurialism and transformational areas of China's economy, such as the burgeoning services and consumer sectors that we believe will drive China's growth during the coming decades. The Fund may be suitable for risk-tolerant investors seeking greater exposure to China's long-term economic development and looking to supplement their existing portfolio of Asian or Emerging Market equities.

Disclosures

You should carefully consider the investment objectives, risks, charges and expenses of the Matthews Asia Funds before making an investment decision. A prospectus or summary prospectus with this and other information about the Funds may be obtained by visiting matthewsasiasia.com. Please read the prospectus carefully before investing as it explains the risks associated with investing in international and emerging markets.

Investing in international and emerging markets may involve additional risks, such as social and political instability, market illiquidity, exchange-rate fluctuations, a high level of volatility and limited regulation. Fixed income investments are subject to additional risks, including, but not limited to, interest rate, credit and inflation risks. In addition, single-country and sector strategies may be subject to a higher degree of market risk than diversified strategies because of concentration in a specific industry, sector or geographic location. Investing in small companies is more risky and more volatile than investing in large companies.

Investment team members in this report include employees of Matthews Asia and its subsidiaries.

Active Share is calculated by taking the absolute value of the difference between portfolio holdings and benchmark weights, summing all of these differences, and dividing by two. The calculation will result in an active share number between 0%, which indicates the portfolio perfectly replicates the benchmark, and 100%, which indicates there is no overlap whatsoever between the portfolio and the index. Active Share for is calculated by comparing the Fund's holdings to its benchmark as of July 31, 2017. Active Share was calculated including cash held in the Fund.
